

Wherever you live and whatever you cook, there's an Aga to suit you. You can choose a Two-oven, Three-oven or a Four-oven Aga that can run on electricity, oil, gas, diesel and, once the fuel is commercially available, bio-fuel – all available in a choice of fifteen colours. As always, Aga is committed to an improved environment, developing new models ready for the next generation of emerging energy technologies and, almost all the cast-iron used in an Aga is reclaimed. As anyone who owns one will tell you, Aga food tastes better simply because an Aga cooks better, using gentle, radiant heat to retain the food's natural goodness and flavour. To discover why an Aga is one of the easiest, most versatile cookers to use, you can book a personal demonstration at your local Aga Shop – simply call us today.
